

PLASTIC COVERS

- Custom-made solutions
- Innovative components
- Efficient und flexible
- Cost-effective
- Experience for years
- Optimal protection
- Easy to install

System „Pilatus“

This new and worldwide unique system works instead all other systems without any cables and anchorages under the plastic film.

This allows a safe and complete traffic ability with tractors and platforms. One- or two parts of plastic film, regardless of the anti-hail net, afford an effective protection against hail, birds and rain.

Winter storage is also at this system space-saving and gently at top of the rows

System „ECO“

The Frustar ECO system is due its flexible design, particularly for fruits which want „to grow high“ such as cherries or apricots. It can be easily installed into existing anti-hail constructions. Optional with the total closed orchard of anti-hail net a protection against birds is given. A combination with an anti-insect net is possible without any effort to reduce the plant protection products to a minimum. The winter storage carried on the top of the rows in a space-saving way, which allows a fast opening and closing of the plastic.

Due to the rapid development of plastic technology worldwide, there are always new products in this sector. Frustar is your trusted partner and known for developing safe and efficient plastic solutions.

System „Standard“

The system „Standard“ is especially for sensitive fruits because it effectively prevents splashing water due the closed roof. Perfect for crops like table grapes or various kinds of soft fruits. The anchorage of the plastic to the system is done by special rubbers, which allows a controlled movement of the plastic film. The winter storage of the plastic film is in the middle of the rows what guarantees less work during the open and closing of the system.

System „START-UP“

The system FRUSTAR START-UP is installed with split plastic on the ridge. The two plastics are connected at the eaves with a special rubber in a zig-zag. Special developed clips and hooks are used for this system. The biggest advantage of the FRUSTAR START-UP system is that the opening and closing of the plastic is quickly and easy to do. The installation is simple and can be done by your own staff. There is also the possibility of combining the FRUSTAR START-UP system with insect or hail protection nets. Winter storage takes place on the ridge. This type of winter storage is considered to be particularly gentle and space-saving.

Keep in touch - „Antiacqua“

The Keep in touch-“Antiacqua“-system combines many advantages that are desirable in a modern plantation. It is not only characterized by the simple and slim design, mainly by the easy handling which enables to manage the work at large areas by less staff. It is possible to install in most cases this system easily in existing orchards. The biggest advantage of these system is that a hail and rain protection is given in one product. This system provides also protection against birds and insects. A special micro climate which builds under the net, assist the fruits to ripe optimally. Due to the effect of microclimate formation, this system can also protect against late frosts, and safe especially sensitive fruits of sunburn.
