

ANTI-HAIL SYSTEMS FOR ORCHARDING

- Best protection for damage caused by hail
- Individual system solutions
- Proven components with highest quality
- Mature technology
- Internationally successful

Orchard with concrete poles

Prestressed concrete poles are extremely long-lasting

Combination of wood and concrete poles

Wooden poles in the anchoring area have the advantage of elasticity and easy installation of the ropes

Construction with impregnated wooden poles

Wooden poles have good elasticity and are easy to install

FRUSTAR systems

reliably protect your culture against the ever increasing occurrence of extreme weather events. Constantly updated hail protection components increase safety, extend the life of the equipment and facilitate the handling in the hail protection plantations.

FRUSTAR's technicians and consultants are familiar with a wide variety of situations and specialized in developing the optimum solution for each individual hail protection system for each customer. **FRUSTAR** offers with its partners advice and best service on an international level.

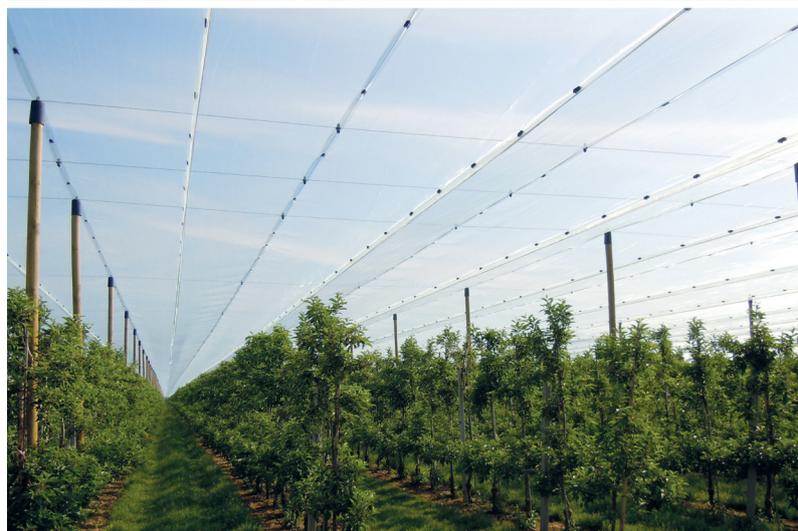

1 row system

2 row system

1 row system „Keep in touch“

3 row system

Fullcover-system

The reversing area is roofed over and the net pulled down to the ground at the side edges and at the front side. The fruit farmer can move freely in the plant during the cultivation.

Advantages:

- insect protection (codling moth, wasps, ...)
- protection of trees at the border
- protection from birds and deers
- drift reduction
